**Benjamin Busche** was as a child fascinated by his father's carpentry shop. Later he oriented himself towards artistry and craftsmanship, and trained as a typesetter. Yet to this day he is still captivated by carpentry, and in his spare time builds and restores furniture. His desire to eat naturally from his garden has long been a strong interest, and his curiosity about everything new and beautiful has led him to become an authority on the nature preserves of Central Europe.

Squirrels, a variety of birds, insects such as butterflies and bees, and many other living things live in our gardens and visit us on the balcony, terrace, and patio. Many help control pests, and since we enjoy having these faunal neighbours in our gardens, we should do something to enhance their living conditions.

This book provides inspirations and practical instructions for constructing food stations, bird baths, insect nooks, hedgehog houses, and other beneficial structures, all with natural and inexpensive materials. Objects of natural materials harmonise well with nature and have decorative value as well. Special attention here is given to species appropriateness to ensure the needs of each type of creature will be met.

- Every object is clearly explained, step by step – easy to create by adept hobbyists or even complete beginners.
